

KRUGER

ECOWATT®

DRIVE SERIES

Simple Installation

Cost Saving

Premium Warranty

Why KRUGER?

KRUGER has been a leading innovator and manufacturer of residential, commercial, and industrial ventilation solutions across Asia since 1985. Today, with a direct presence in over 18 regions throughout Asia, world-class R&D and manufacturing facilities, Kruger is able to offer its customers unparalleled service and support at a local level. Our customers trust Kruger to provide the best solutions for their needs.

Why use a KRUGER ECOWATT® Drive for Demand Controlled Ventilation (DCV)?

In joining the global effort to combat climate change, KRUGER, a world leader in ventilation, is presenting the Demand Controlled Ventilation (DCV) system. This system enables performance control of installations by adjusting them to the real needs of ventilation.

We also adopt "ECOWATT® Drives K-Series", a new high-performance variable-frequency drive (VFD) specifically designed for fan applications. The VFD comes with the latest PID function to support the DCV system, which can regulate constant or variable pressure, airflow, temperature, and humidity. This helps optimize the output voltage of the VFD to the actual load of the fan motor, thus minimizing power consumption.

As depicted below, when using a KRUGER VFD to reduce the fan flowrate down to 80% flow, there is a reduction in power consumption by 51.2%.

The ability to reduce energy usage also cuts the CO2

Standard Models

Series	Input Voltage	Output Voltage	Output Power	Ingress Protection
K120	1PH 220V 50/60Hz	3PH 0-220V 0 - 400Hz	0.40 - 4.0kW	IP20
K154			0.75 - 3.7kW	IP54
K320	3PH 400V 50/60Hz	3PH 0-400V 0 - 400Hz	2.20 - 500kW	IP20
K354			5.50 - 110kW	IP54

Applications

Energy Saving

Auto Energy Optimization Function for Real Time Loading

Accurate Motor Autotuning

To optimize the FAN performance and efficiency, Ecowatt® Drives will automatically measure the electrical motor parameters to use in controlling algorithms when commissioning.

Automatic Energy-Saving Run

In light-load state, the motor can adjust the output voltage automatically to achieve energy saving.

PID Function for Demand Controlled Ventilation

PID control is mainly used to adjust the VFD output frequency or output voltage through performing scale-division, integral and differential operations on the difference between feedback signal of controlled variables and signal of the target.

It is suitable for flow control, pressure control, temperature control, etc. by following Kruger Demand controlled Ventilation concept.

Simple Installation

Simple Power and Control Wiring by following the quick setting manual.

Simple Setting and Easy Monitoring via Big LCD Keypad and PC Interface Program

- ▶ Ecowatt® Drives provide a big LCD keypad with Quick parameter setting function.
- ▶ In case of needing fine tuning or copying VFD parameter, it also has the PC interface program for configuration.

Security and Safety

▶ Safe Torque Off (STO) Function

Safe Torque Off

The STO function switches off the drive output by turning off the drive signals to prevent unexpected startups of the motor when the main power supply of the drive is not switched off.

In the event that any preventive maintenance which requires exposing the fan or any rotational parts to maintenance personnel, it is best that the VFD is electrically disconnected by a cutoff switch to ensure the safety of the maintenance personnel.

Reference Standards:

IEC 61508-1, IEC 61508-2, IEC 61508-3, IEC 61508-4, IEC 62061, ISO 13849-1 and IEC 61800-5-2

▶ Complied with the EMC and Safety Standards

The CE marking on the name plate of the VFD indicates that the VFD is CE-compliant, meeting the regulations of the European low-voltage directive (2014/35/EU) and EMC directive (2014/30/EU).

Friendly with Environment

Built-in EMC filter and a DC choke.

This design replaces the need for an electrical distribution cabinet and saves space for other devices, while providing the benefits of harmonic suppression and better power quality to the system.

IP20 rating is touchproof and will be resistant to dust or objects that are over 12mm in size. However, it has no protection whatsoever against liquids and will be susceptible to damage if it comes into contact with sprays of water.

IP54 rating is protected against dust ingress sufficient to prevent the product from operating normally but it's not dust tight. The product is fully protected against solid objects and splashing of water from any angle.

	EMC	1PH 220V (4kW) VFD model can satisfy the requirements of IEC 61800-3 C3, other models can satisfy the requirements of IEC 61800-3 C3 by installing optional external filter. The whole series can satisfy the requirements of IEC 61800-3 C2 by installing optional external filter.	VFD model can satisfy the requirements of IEC 61800-3	Conducted emissions of all 380V models meet the requirements of C3 in the IEC/EN 61800-3 standard. External filter is optional: Conducted emission can meet the requirements of C2 in the IEC/EN 61800-3 standard. Note: it is required to observe the EMC compliance required by the appendix of the manual. The motor and motor cables shall be selected based on technical requirements specified in the appendix of the manual.

Accessories

The following figure shows the external option wiring of the VFD.

Image	Name	Description
	Input Reactor	Accessories used to improve the current adjustment coefficient on the input side of the VFD, and thus restrict high-order harmonic currents. The VFD models of 160P and higher can be directly connected to external DC reactors.
	DC Reactor	
	Input Filter	Accessory that restricts the electromagnetic interference generated by the VFD and transmitted to the public grid through the power cable. Try to install the input filter near the input terminal side of the VFD.
	Braking Unit or Braking Resistor	Accessories used to consume the regenerative energy of the motor to reduce the DEC time.
	Output Filter	Accessory used to restrict interference generated in the wiring area on the output side of the VFD. Try to install the output filter near the output terminal side of the VFD.
	Output Reactor	Accessory used to lengthen the valid transmission distance of the VFD, which effectively restricts the transient high voltage generated during the switch-on and switch-off of the IGBT module of the VFD.
